MISSILE AND SPACE SUMMARY

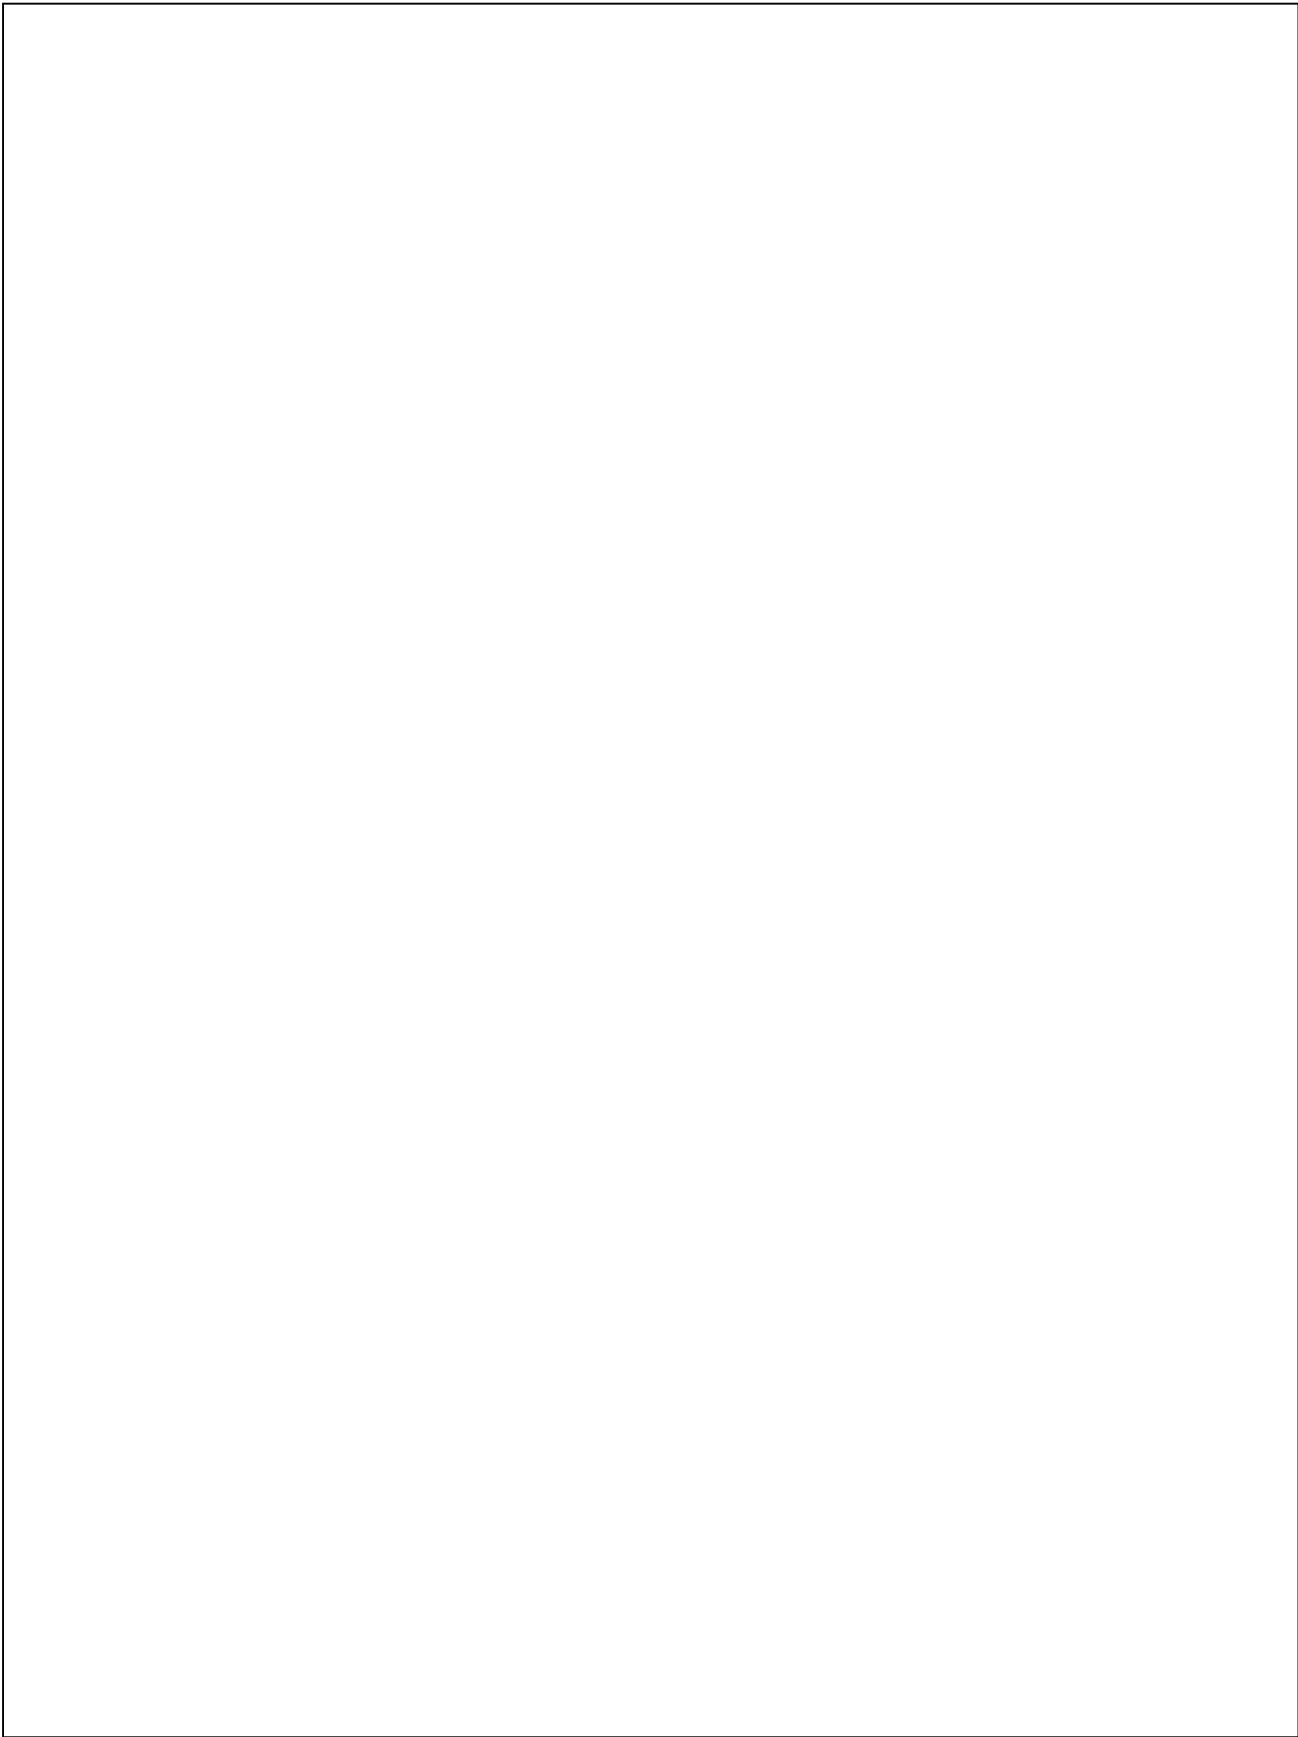

19 May 1967

1. Australia to launch its first satellite: According to a press announcement, Australia plans to launch its first satellite from the Woomera Rocket Range on an unspecified date during 1967. An American Redstone Carrier Rocket will be used to orbit the satellite. Redstone missiles have previously been used at Woomera to conduct ballistic missile reentry tests under Project Sparta. (UNCLASSIFIED)

2. Possible SSM related activity, USSR Pacific Fleet Area:

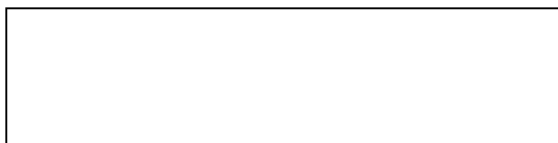

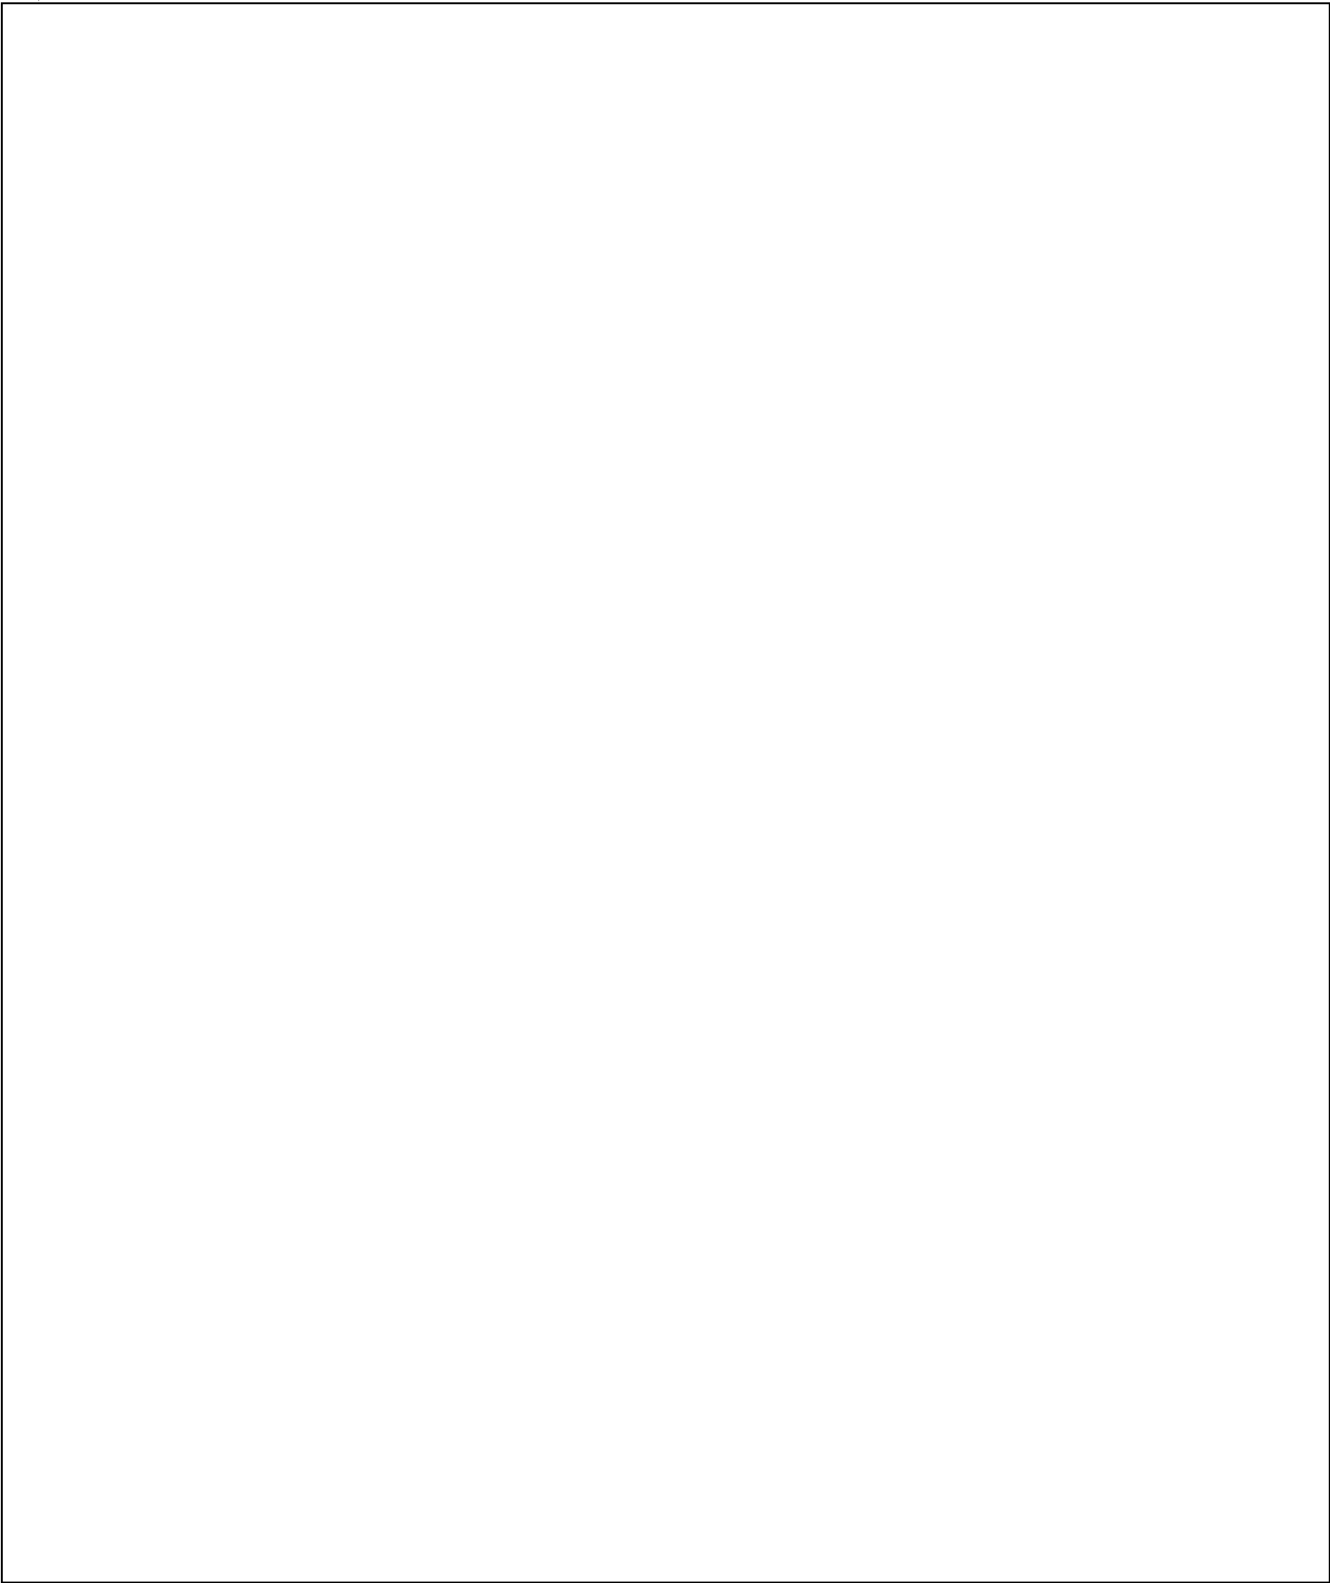

The Whiskey Class unit carries four SS-N-3 cruise missiles in its sail. The last noted firing by a Whiskey Class unit in the Pacific Fleet Area was in 1962. Recent activity on the Mys Tyk Range, including an SS-N-5 firing by Golf 173 on 3 May, may indicate an increased missile firing schedule in the Pacific Fleet Area.
